

# Certified Dust Safety Professional™ (CDSP) Program

Industry-Recognized Certification for Combustible Dust Safety Leaders

---

## Advance Your Career and Protect Your Workplace from Combustible Dust Hazards

The **Certified Dust Safety Professional™** program by Dust Safety Science is designed for professionals responsible for combustible dust safety in industrial facilities. This comprehensive, self-paced program teaches everything you need to understand and protect against dust explosion hazards — and how to effectively work with Dust Hazard Analysis (DHA) providers to keep your facility safe and compliant.

Led by industry experts, the program covers the full spectrum of combustible dust hazard awareness, prevention, and mitigation. Each course aligns with global industry standards and best practices, giving you practical skills you can apply immediately to improve safety, reduce risk, and strengthen compliance.

---

## About the Certified Dust Safety Professional™ Program

### What You'll Learn

#### Core Self-Paced Training Courses:

- Hazard Awareness, Identification & Management
- Combustible Dust Sampling & Testing
- Ignition Source Evaluation & Control
- Prevention & Mitigation Strategies

- Interpreting Combustible Dust Test Results
- Management Systems
- Housekeeping Programs

**Optional Electives:**

- Explosion venting design
  - Electrostatic ignition hazards
  - Case studies & incident breakdown trainings
  - Emergency response
- 

## **Why Choose the CDSP Certification?**

### **Industry Expertise You Can Trust**

With over 25 years of experience in combustible dust safety, our team has trained hundreds of safety professionals worldwide. This program is built from real-world incidents, investigations, and industry best practices.

### **Practical, Applicable Skills**

Go beyond theory — gain the knowledge and tools to apply combustible dust safety principles directly in your workplace, including templates, examples, and actionable checklists.

### **Flexible, Accessible Learning**

The CDSP is 100% online, self-paced, and accessible from anywhere. No travel or lodging required — simply log in and learn on your own schedule.

### **Professional Certification**

Earn an industry-recognized credential that demonstrates your commitment to workplace safety and compliance.

---

# How the Certification Works

## Step 1: Complete Core Courses

Work through all required training modules at your own pace, supported by expert instructors and peer discussion.

## Step 2: Select Electives

Choose 1–2 electives to deepen your expertise in specialized areas of combustible dust safety.

## Step 3: Apply Your Knowledge

Submit two dust-related project summaries or experience records showing how you've applied what you've learned.

## Step 4: Pass the Final Exam

Demonstrate your knowledge and earn your Certified Dust Safety Professional™ credential.

---

## Program Timeline & Commitment

- **Total Duration:** 6-month program, with certification completed within 12 months.
  - **Effort Required:** 0.5–1.0 hours per week on average.
  - **Support:** Ongoing instructor guidance, peer community, templates, and tools.
- 

## Who This Program Is For

- Safety managers & EHS professionals
- Plant managers & operations leaders
- Compliance officers & risk managers
- Engineers & maintenance supervisors

- Consultants working with combustible dust industries
- 

## **Next Cohort Starts October 1st – Save 30%**

We are currently registering the second cohort of **15–20 professionals** to begin October 1st at a **30% discount** off the full certification fees.

Secure your place today and take the next step in your combustible dust safety career.
